

The Benefits

Due to the sheer amount of energy required, electric golf cars are simply not an option for some golf courses and the legal and environmental issues surrounding on-site storage make petrol driven cars equally unsatisfactory.

Now there's a solution. A bulk tank of Calor LPG installed on-site means refuelling downtime is reduced enormously, with no lengthy wait for recharging. It also eliminates the environmental risk associated with fuel spillages and reduces the risk of pilfering.

It's also much easier to store Calor LPG than petrol, while a simple electric pump ensures that refuelling is reliable and straightforward. There's no need to worry about running out of fuel either. Our computerised delivery system automatically predicts when your bulk tank is due for another delivery. And maintenance and testing of the tank, plus a 24 hour, 365 day emergency call-out service, are all included in the low standing charge.

Advantages Over Petrol

- Duty free Calor LPG could save you up to 60% on your current fuel bills
- On-site bulk tanks can store large quantities of fuel safely
- Risk of pilfering is greatly reduced compared with alternative fuels like petrol
- Environmental risks associated with fuel spillage are eliminated

Advantages Over Electric

- The internal Calor LPG tanks allow golf cars to run round after round without the inconvenience of refuelling and recharging
- No loss of power when running on LPG
- No lengthy refuelling process

Advantages of Calor as a Supplier

- The UK's largest Tanker fleet with a proven safety record
- Computerised delivery system automatically predicts when your bulk tank is due for another delivery
- The UK's number one supplier of LPG
- Over 65 years of experience/expertise in providing LPG solutions
